

ENVIRONMENTAL METHODOLOGIES

Down to EARTH Solutions for a Planet in Need of Ways to Save Itself. SM

- **Options to mitigate and clean pollution contamination and reduce and prevent climate change**
- **Eco Allies' fast growth SuperGreenTrees™ ("SGT") clean the air using nature's own science**
- **Eco Allies products remove carbon, methane, and clean-up pollution -generating offset credits**
- **The Hardy SuperGreenTree,™ using its anchor root system, can remediate contaminated soil**

Climate Cure Capital Corporation™ - Climate Cure's expertise in carbon offset credits is in creating, handling, and brokering them. Included in Climate Cure's experience is project design, management, implementing greenhouse gas reduction methodologies and in brokering resulting carbon offset credits.

Eco Allies® Inc.- The SuperGreenTree™ was developed by Climate Cure, using its proprietary root-grafting system, not genetic engineering. Its intellectual property was provided to Eco Allies® so Climate Cure can focus on services and developing solar energy farms. SGTs are a high-density, short rotation tree, growing up to 60 feet in 3 years. They can be harvested and will regrow from the same stump 5-6 times. They produce Eco Allies branded biochar, lumber, biomass for renewable energy, and for carbon sequestration and land remediation, all while generating methane and carbon offset credits. Eco Allies is pursuing projects and opportunities where SGTs will be grown for the particular list item chosen.

SuperGreenTrees™ Grow Fast, Strong, and Tall
